# Upcoming Astronomical events – January.

◆ **Wednesday 31<sup>st</sup> January:**

-Super: Closest to Earth

# Upcoming Astronomical events – January.

## ◆ **Wednesday 31<sup>st</sup> January:**

- Super: Closest to Earth
- Blue: Once in a Blue Moon

# Upcoming Astronomical events – January.

## ◆ **Wednesday 31<sup>st</sup> January:**

- Super: Closest to Earth
- Blue: Once in a Blue Moon
- Blood Moon: In USA,  
Russia, Northern Europe,  
Asia and Australia.

# Upcoming Astronomical events - February.

## ◆ **Thursday 15<sup>th</sup> February:**

-New Moon: Dark sky, good for observing.

## ◆ **Saturday 17<sup>th</sup> February:**

-Mercury at superior conjunction.

◆ February has a Black Moon.

# Conjunction.

◆ February has a Black Moon.

# Upcoming Astronomical events – March.

## ◆ **Friday 2<sup>nd</sup> March:**

-Full Moon: Bright sky, bad for observing.

## ◆ **Sunday 4<sup>th</sup> March:**

-Neptune in conjunction with the Sun.

# Planets visible these months.

- ◆ **Venus:** West to South-West, evening sky.
- ◆ **Mars:** South-West, early morning sky.
- ◆ **Jupiter:** Eastern, early morning sky.
- ◆ **Uranus:** Western, evening sky.

[Not To Scale]

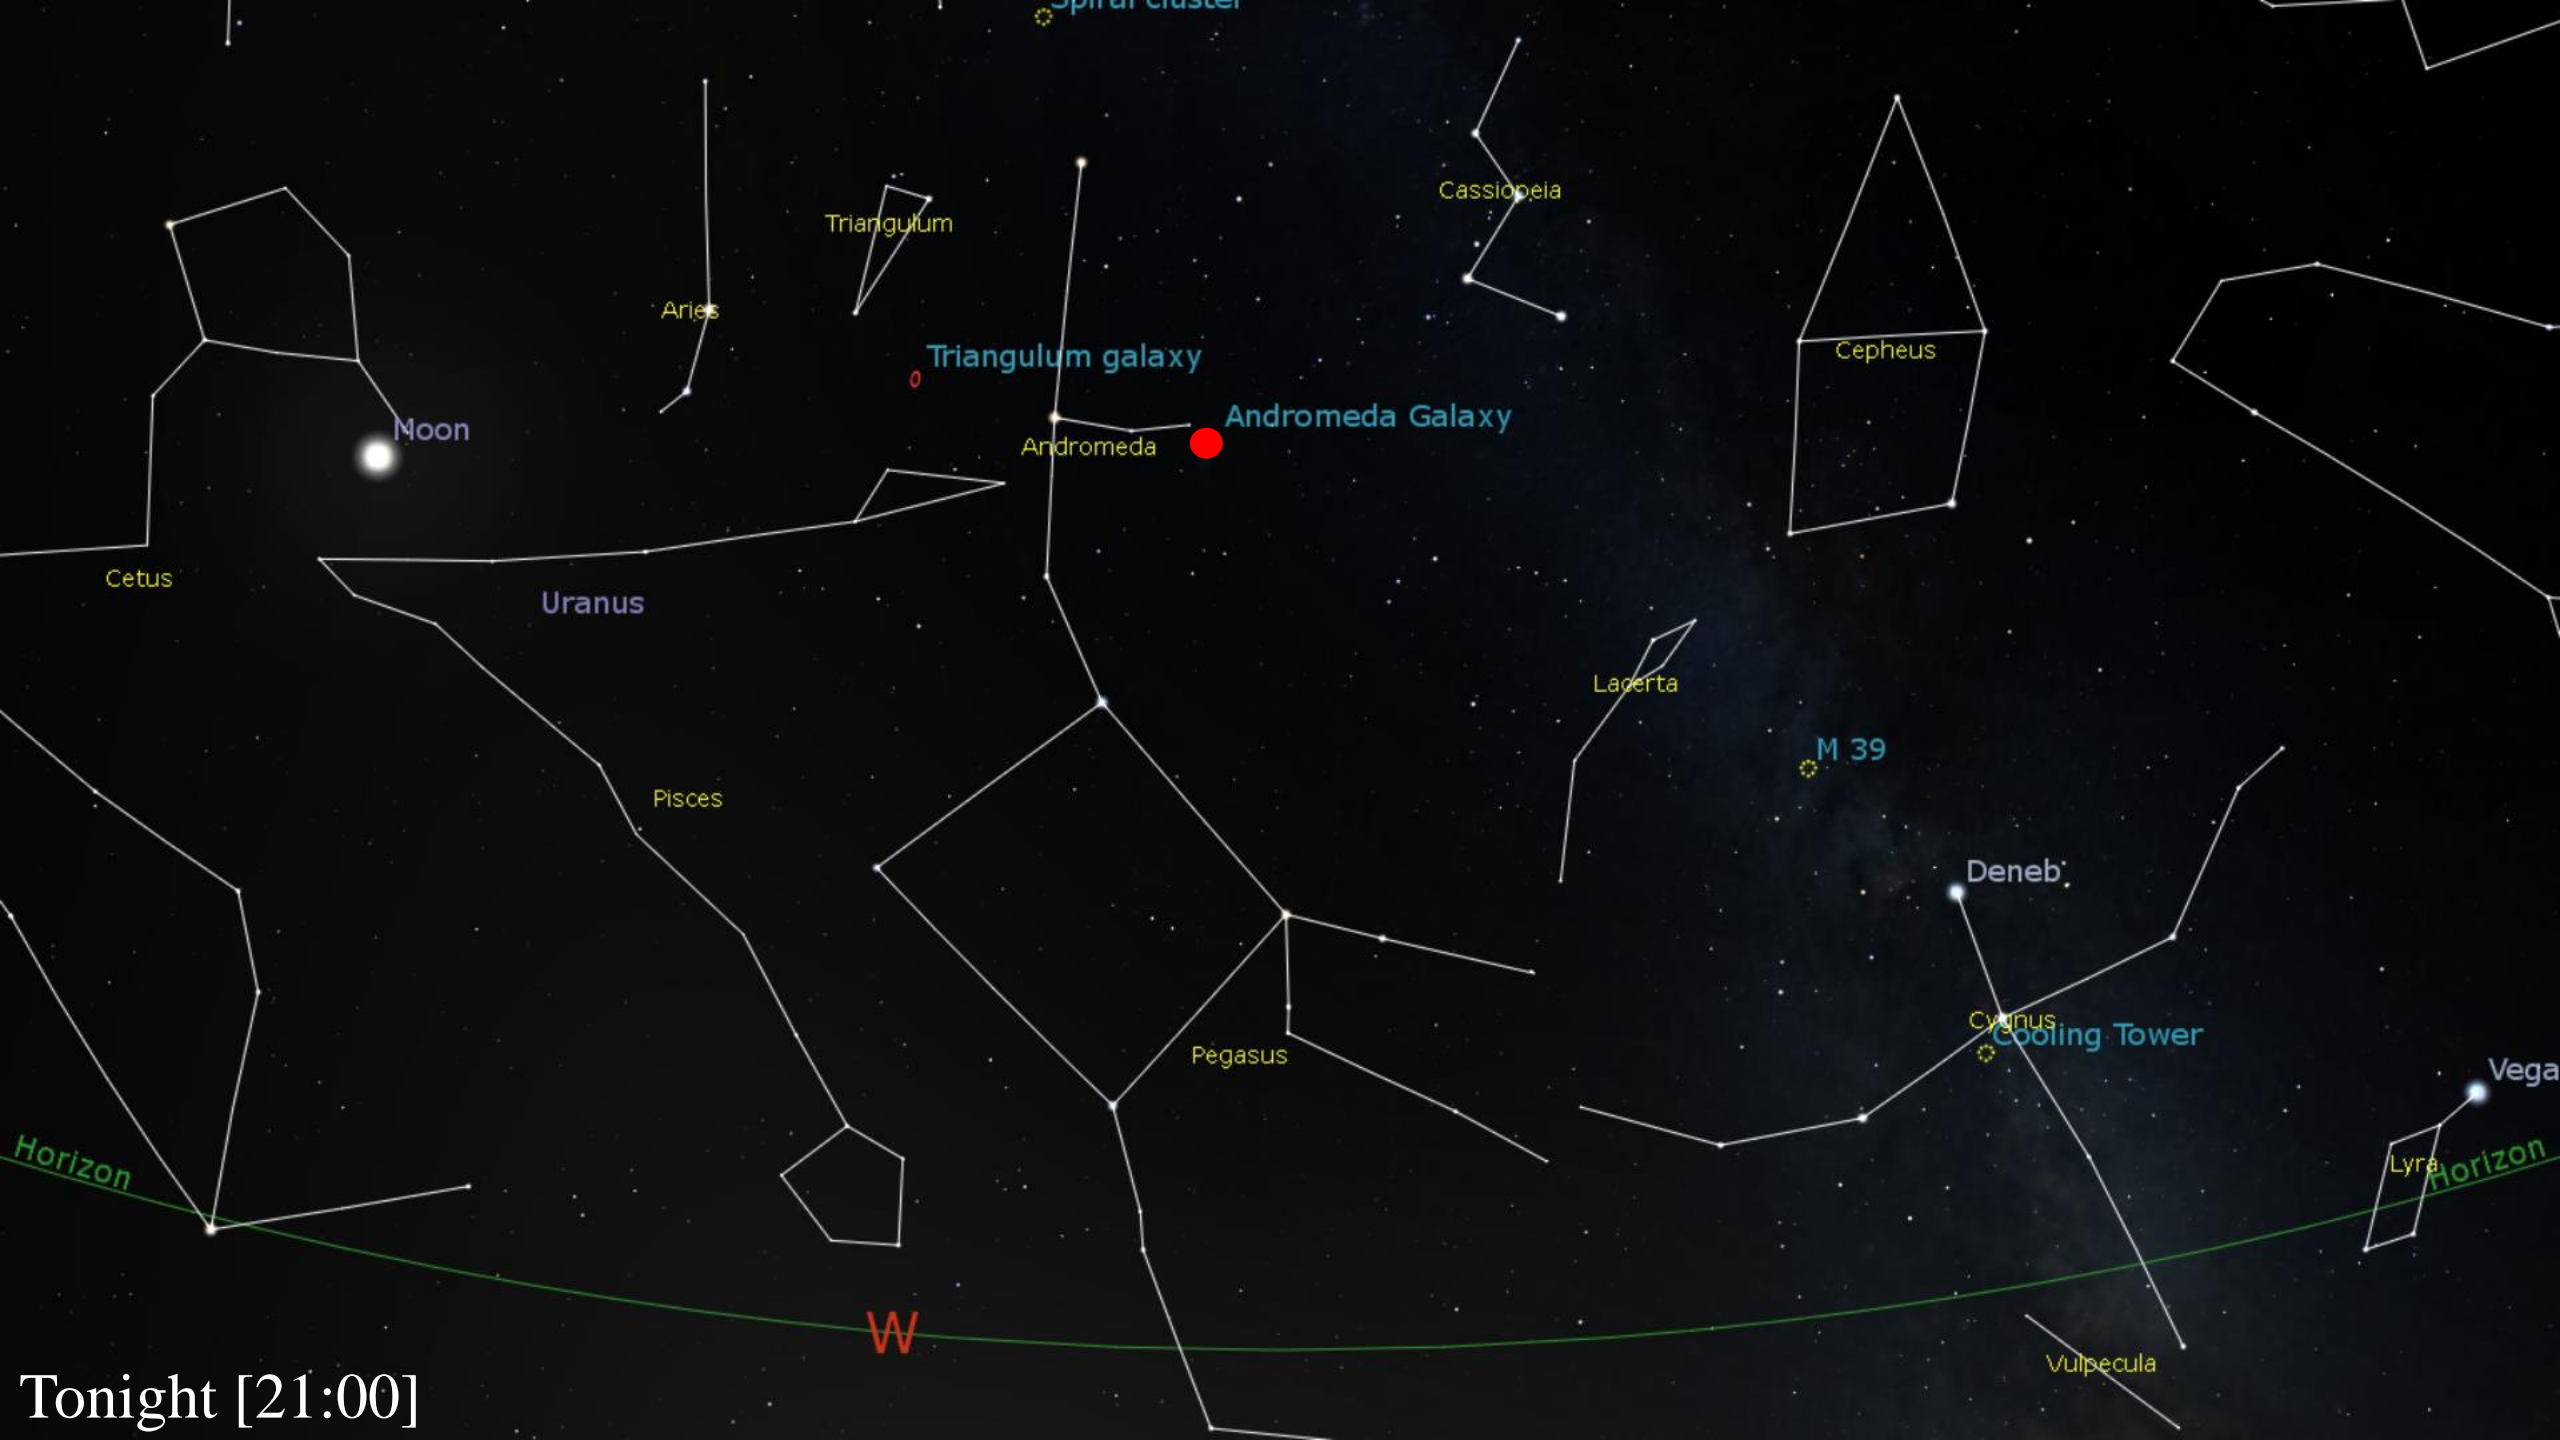

# Highlight Object:

## M31 The Andromeda Galaxy.

- ◆ Chance of observation here:  
Good, Can be observed with the naked eye.
- ◆ The largest galaxy in the local group.
- ◆ It is expected to collide with the Milky Way in 4.5 Billion years.
- ◆ First described by a Persian astronomer in 964 and was catalogued in 1764 by Messier.
